

# LIFTING LANYARDS AND BRIDLES

P/N: LNR-UH-00-00-000-000-SL-02

## FEATURES

- 1/2" galvanized pear ring standard
- Drop forged Grade 80 Self-Locking Swivel Hook standard
- Other specialty hooks and hardware available

## TECHNICAL

- Technora® and UHMPE load bearing fibres are stronger than steel, polyester, or nylon
- High resistance to fatigue, abrasion, heat (Technora®) and chemicals
- Cover Systems ensure protection for load bearing fibers

## MATERIAL

- 9/16" Technora® composite rope (up to 3000 lbs. WLL)
- 12-strand UHMPE (over 3000 lbs. WLL)

## ABOUT

Emergco® rope lanyards are used between the helicopter cargo hook and the transported external cargo load. Our double braid Technora® composite and UHMPE 12-strand rope lanyards are more aerodynamic than flat webbing lanyards and more compact and lighter than wire rope lead lines.

We also offer multi-point lifting bridles and custom lanyards constructed with the same materials as our single-leg lanyards.

- Single-leg lifting lanyard and multi-point bridle configurations
- Variety of sizes and lengths available
- Constructed of high quality materials and hardware
