- Rated load: 600 lbs. (272 kg.)

MATERIAL

- MIL-W-4088 nylon webbing
- Protective color-coded Cordura covers on soft attachment loops

ABOUT

The Quick Connect Lanyard (QCL) is used to provide an easily accessible, stow-able lanyard for connecting a harness to the Main Attachment Point (MAP) on a HETS™ Main Load Line assembly or to the main connection point on a compatible hoist.

The QCL allows the user increased ease of connection by providing a means of holding the MAP ring or hoist attachment in one hand and positively attaching the QCL with the other. This eliminates difficulties connecting to harness rings located close to the user's body. The QCL can be configured with a variety of end terminations and lengths, allowing the type of connection to be specifically tailored to a particular work environment or system.

- Recommended accessory for quick, easy attachment between PCDS and HETS™ Main Attachment Point (MAP) or hoist connection
- Variety of length and end hardware configurations available to suit specific task
- Available with full-length protective Cordura® cover to protect from abrasion in utility, power-line or other high wear environments
