

RESCUE BASKET

P/N: AC01-000-00-00

FEATURES

- Bottom plastic mesh liner with 1" openings
- Corrosion resistant hardware
- Flotation cylinders with reflective SOLAS

TECHNICAL

- Length: 18" (46 cm) standard, other lengths available
- Rated load: 600 lbs. (272 kg.)

MATERIAL

- Frame made from corrosion resistant tubular 304 Stainless Steel
- Net sides - 1/2" nylon webbing
- Padded cordura covers on bail assemblies

ABOUT

Our rescue basket combines the compact stowage of a rescue net system with the ruggedness, rigidity and safety of a tubular frame rescue basket. The design reduces stowage space making it ideal for use by operators of smaller helicopters for SAR operations.

Design features a large open internal volume, able to accommodate two-person recovery in a single hoist-sling evolution, reducing the time at scene and in hover. Bail assemblies fold into the basket and each side collapses for stowage. Basket is easily deployed by simply lifting the bails and top rail up, rotating the side supports down, and securing in place with simple spring-locks. This provides a rigid structure that aids handling and entry into the basket. All components are corrosion resistant, and require minimal maintenance for extended service life.

- Built in flotation with safety instructions and reflective markers for self-righting and reserve buoyancy
- Collapsible rigid basket solution for balance of ruggedness and stow-ability
- Stainless corrosion-resistant construction
- HD side locking cast stainless steel shackle
