

TWO PERSON RESCUE NET

P/N: AC01-000-00-00

FEATURES

- Corrosion resistant Forged or Stainless Steel lifting ring (11,250 lbs. MBS)
- 1000 Denier Cordura flotation collar
- Reflective SOLAS installed on collar

TECHNICAL

- Weight: 17.5 lbs. (7.9 kg.)
- Rated load: 715 lbs. (325 kg.)
- Dimensions: W 32" x L 22" x H 47" (collapses to <6" high for transport)

MATERIAL

- Frame made from corrosion resistant 304 Stainless Steel
- Rope is high-visibility, abrasion-resistant polypropylene

ABOUT

The Emergco Two Person Rescue Net is a Personnel Carrying Device System (PCDS) designed for rapid rescue in a marine environment. Constructed with high-visibility polypropylene rope, corrosion resistant hardware, and a durable 1000 Denier Cordura flotation collar, the Rescue Net collapses into a carry bag less than 6" high for easy stowage and transport.

For hoist-equipped helicopters, the Rescue Net is lowered on a hoist cable to the victim(s). For fixed load line systems (short-haul or Emergco's Helicopter External Transport System) the Rescue Net is attached to the load line.

- Constructed with unparalleled quality and craftsmanship
- Security rope with 316 Stainless Steel Screw-lock carabiner spans opening of basket to ensure occupant safety
- Layer of clear polyurethane tubing protects rope on bottom frame
- Removable sea anchor orientates the basket when in a marine environment
